Project

ContiTech
China

Introduction

Production of rubber and plastic products is serious business, and ContiTech knows it well. Complex machinery co-operating at the same time at the production line requires reliable and precise Touch PC unit to control it – exactly what is delivered by faytech's 19" Touchscreen PC.

Used together with production line machinery, this Touch PC allows the automatization of assembly processes, measurement of real-time production status and output and overall improvement of analytical capabilities and data-mining.

ContiTech was looking for a control panel solution to ensure the following:

- A safe, fast and efficient touch display to provide reliable status updates
- Able to handle tough environment, such as the industrial floor.
- Easily mountable and replacable display PC.

The 19" Touchscreen PC

faytech's 19" Touchscreen PC stands out among competition with its fanless silent operation, IP65 front panel design, high reliability and fine craftwork. It is the perfect choice for industrial and business application. It has flat edge to edge glass with IP65 water- and dust proof front panels and a sturdy aluminum case with stable VESA 100 fixation bolts
